Sonderformsteine auf Anfrage.
Special shaped bricks on request.

Mit ihrer langen Tradition setzen Formsteine architektonische Akzente, erfüllen gleichzeitig aber auch konstruktive Funktionen. Formziegel beeinflussen die Architektur des gesamten Hauses. So wirken z.B. strenge 90°-Winkel durch abgeschrägte oder abgerundete Ecken weicher.

Innen- und Außenwinkel unterbrechen gradlinige Flächen. Und während einige Formziegel einen überwiegend dekorativen Charakter bei der Gestaltung von Gesimsen oder Stürzen haben, steht bei anderen die praktische Anwendung im Vordergrund. Passend zu unserem umfangreichen Produktprogramm der rechtwinkligen Verblendklinker bieten wir Ihnen diese „Klinker in Bestform“ für individuelle Detaillösungen – wie und wo auch immer sie zum Einsatz kommen.

Shaped bricks have a long tradition in setting architectural accents, while at the same time fulfilling constructive functions. Shaped bricks influence the architecture of the entire house. Harsh 90° angles, for example, appear much softer when corners are bevelled or rounded.

Internal and external angles break up straight-lined surfaces. And, while some shaped bricks have a predominantly decorative character when designing cornices or lintels, the practical implementation is the focus for others.

To match our extensive product range of rectangular bricks, we offer you these „bricks on top form“ for individual detailed solutions - however and wherever they are used.
